

# NutrInD: Nutrition In Duchenne Study

## Assessing Energy Expenditure, Dietary Intake and Body Composition in People with Duchenne Muscular Dystrophy.

### Hub Summary

The purpose of this study is to collect information about the nutritional needs of people with Duchenne Muscular Dystrophy (DMD).

Proper nutrition is very important for children, adolescents, and young adults with DMD. Excessive weight gain is a very common problem which leads to obesity. Many factors contribute to weight gain. These include steroid treatment, excess calorie consumption, less physical activity, and lower muscle mass. Extra weight can make walking and transferring more challenging. Obesity may lead to high blood pressure, and affect heart and lung function. Adequate eating habits are also valuable in supporting growth, bone and gut health, and helping the body process nutrients from food.

A better understanding of the nutritional needs of young people with DMD can help improve their overall well-being. So far, very little is known about this.

We hope that the findings of this study will help us create specific nutrition-related guidance for young people with DMD.

**Study Number: University of Glasgow MVLS College Ethics Committee Project No: 200230415**

### Description by Duchenne UK

Participation in the study involves 1 visit to the Metabolic Research Unit in the New Lister Building, Glasgow Royal Infirmary for:

1. Weight, height, and length of forearm measurements.
2. Body fat and muscle stores measurements.
3. Consumption of a special type of water (like tap water - totally safe) and provision of 3 saliva samples.
4. Measurements of the number of calories the body burns at rest and during different activities.
5. Completion of questionnaires about health & medication, usual food intake, and physical activity.

Following the visit, participants will need to:

1. Wear a heart rate monitor on the wrist (like a watch) for 7 days.
2. Record food and drink consumption for 4 days.

**We are looking for participants from across the UK.** Study-related travel expenses and overnight accommodation (if traveling from outside Glasgow) will be reimbursed. Compensation for participants' time will be offered upon study completion.

## Primary Outcome Measures

- Total Energy Expenditure (How much energy the body needs in a day).
- Physical Activity Level (How many calories the body burns with physical activity) & Habitual Physical Activity Patterns.
- Habitual Energy Intake & Diet (How much, how often, and what type of food is consumed).
- Body Composition (What is the percentage of fat and muscle in the body).

### Can I take part?

#### Inclusion Criteria

##### Ambulant males with DMD

- Ambulant males (defined as able to walk around the house independently without assistance) with DMD
- Aged 5 to 16 years (inclusive of 16 years)
- On daily corticosteroid therapy (Prednisolone, Deflazacort, or Vamorolone) for at least 12 months

##### Non-ambulant males with DMD

- Non-ambulant males (defined as unable to walk around the house independently without

## Trial Status Recruiting

**UK Locations**  
Glasgow, Recruiting

**Trial Sponsor**  
Duchenne UK

**Length Of Participation**  
1 study visit, 7 days of home recordings

**Recruitment Target**  
40 (20 ambulant and 20 non-ambulant)

**Ambulatory**  
Ambulant and non-ambulant

**Therapeutic Category**  
Observational

**Age**  
5-21

**Mutation Specific**  
All treatment types

**Muscle Biopsy**  
No Muscle Biopsy Required

**MRI**  
No

assistance) with DMD

- Aged 10 to 21 years (inclusive of 21 years)
- On daily corticosteroid therapy (Prednisolone, Deflazacort, or Vamorolone) for at least 12 months

## Exclusion Criteria

### Ambulant males with DMD

- A secondary major chronic or genetic medical diagnosis (other than DMD)
- Unable to provide informed consent

### Non-ambulant males with DMD

- A secondary major chronic or genetic medical diagnosis (other than DMD)
- Need for the use of day-time assisted ventilation
- Presence of severe nutritional problems (e.g., gastrostomy feeding)
- Unable to provide informed consent
